

conduit enabling fluid communication to and from the pot body at the first end and being capable of absorbing fluid into the leg at the second end from the tray; and

a clearance or distance defined between the lower side walls of the pot body and the up edge of the side walls of the tray for air flowing under the pot, and adding fluid to the tray.

20.(Canceled) The plant pot of claim 8, wherein the at least one leg includes more than two legs.

21.(Canceled) The plant pot of claim 8, further comprising a tray, the pot sits in the tray, between the side walls of the pot body and the up edge of the side walls of the tray having a clearance/distance, and may adding fluid to the tray through the opening area between the side walls of the pot body and the up edge of the side walls of the tray.

22. (New) A plurality of pot with a tray apparatus, comprising:

 a plurality of pot, each pot having side walls and a bottom wall; and
 a large tray for a plurality of pot sits in, the large tray having side walls and a bottom wall; and
 a plurality of air vents disposed on the bottom wall of the each pot; and
 at least one leg build into the each pot at a first end, the at least one leg having a side walls and a bottom wall at a second end, at least one hole disposed on the bottom wall of the leg, the leg stand in the tray, the fluid conduit is between the first end and the second end of the leg, so that a fluid conduit enabling fluid communication to and from the pot body at the first end and being capable of absorbing fluid into the leg at the second end from the large tray.

In the Claims (Clear Version)

8. A plant pot apparatus, comprising:
Sub. 61
PT
a pot body, the pot body having side walls and a bottom wall; and
a tray, the tray having side walls and a bottom wall; and
at least three leg build into the pot body at a first end separately; and
a plurality of air vents disposed on the bottom wall of the pot body; and
each of the at least three leg having side walls and a bottom wall at a
second end, at least one hole disposed on the bottom wall of the leg, the legs stand in the
tray, the fluid conduit is between the first end and the second end of the leg, so that a fluid
conduit enabling fluid communication to and from the pot body at the first end and being
capable of absorbing fluid into the leg at the second end from the tray; and
a clearance or distance defined between the lower side walls of the pot
body and the up edge of the side walls of the tray for air flowing under the pot, and
adding fluid to the tray.

22. (New) A plurality of pot with a tray apparatus, comprising:
Sub. 62
P2
a plurality of pot, each pot having side walls and a bottom wall; and
a large tray for a plurality of pot sits in, the large tray having side walls and
a bottom wall; and
a plurality of air vents disposed on the bottom wall of the each pot; and
at least one leg build into the each pot at a first end, the at least one leg
having a side walls and a bottom wall at a second end, at least one hole disposed on the
bottom wall of the leg, the leg stand in the tray, the fluid conduit is between the first end
and the second end of the leg, so that a fluid conduit enabling fluid communication to and

from the pot body at the first end and being capable of absorbing fluid into the leg at the second end from the large tray.
